1 Introduction

1.1 Purpose

This Vision document defines the vision, scope, and stakeholders of the **HomeStore** project. Its purpose is to establish a shared understanding among the development team, the customer, and stakeholders regarding *what we are building, for whom, and why*.

This document is **not a formal contract**, but a **guiding reference** for future decisions throughout the software lifecycle. It is reviewed at the end of each Sprint.

1.2 Scope

- **In scope:** Business goals, target users, MVP boundaries, success metrics, high-level risks.
- **Out of scope:** Technical details, UI design, detailed functional requirements (covered in the SRS).

1.3 Definitions and Acronyms

Term	Definition
MVP	Minimum Viable Product
User Story	A requirement described from the user's perspective
Persona	A fictional representative of a target user
Sprint	A short development cycle (2–3 weeks) in Scrum
DoD	Definition of Done — the criterion for “completed” work

1.4 References

- IEEE 830 — Recommended Practice for Software Requirements Specifications
- Roman Pichler — *Product Vision Board*
- Scrum Guide (2020)
- Sommerville — *Software Engineering*, Chapters 1–2

2 Product Vision

2.1 Vision Statement

For owners of small home-appliance stores **who** sell authentic, warranty-backed products but are only known to local customers, **HomeStore** is an **online storefront** **that** provides a simple, trustworthy catalog, comparison, and ordering experience.

Unlike large marketplaces with multiple sellers and uncertain quality, **our product** focuses on a single trusted seller with genuine warranties.

2.2 Value Proposition

For	Value
End customer	Fast purchase, easy comparison, warranty assurance
Store owner (Admin)	Access to customers beyond the neighborhood, simple product management
Warehouse staff	Accurate inventory tracking without paperwork

2.3 Competitive Advantage

- **Simplicity:** A simpler UI than Digikala and Bamilo
- **Focus:** Only home appliances, nothing else
- **Trust:** Guaranteed authenticity and warranty
- **Local-first:** Support for customers in smaller cities

3 Problem and Opportunity

3.1 Problem Statement

Owners of small home-appliance stores face the following challenges:

1. **Geographic limitation:** Only local customers buy from them.
2. **No online channel:** They cannot offer products online.
3. **Manual order process:** Orders are taken by phone, noted on paper, and error-prone.
4. **Inventory opacity:** Customers do not know what is in stock.
5. **No comparison ability:** Customers cannot compare products side by side.

3.2 Opportunity

- Growth of online home-appliance shopping in Iran
- Increasing internet penetration in small cities
- Absence of small stores in the online space
- Opportunity to create a niche market for authentic, warranty-backed products

4 Target Users and Stakeholders

4.1 Stakeholders

Stakeholder	Role	Interest
Mrs. Rezaei	Store owner (Admin)	More sales, easy management
End customer	Home-appliance buyer	Fast purchase, trust, comparison
Warehouse staff	Inventory manager	Accurate records, quick access
Development team	Product builders	On-time delivery, learning
Course instructor	Project supervisor	Engineering discipline

4.2 Key Personas

Full details are in `personas.md`. Summary:

Persona	Role	Key Trait
Mrs. Rezaei	Admin	42 years old, moderate technical skill
Maryam	Customer	32 years old, informed buyer
Reza	Warehouse staff	28 years old, low technical skill

5 Product Scope

5.1 In Scope (MVP)

Functional:

- **F-01** Product catalog with images, prices, and specifications
- **F-02** Advanced search and filter (brand, price, energy rating, capacity)

- **F-03** Product detail page with warranty and technical specs
- **F-04** Compare 2–3 products in a table
- **F-05** Shopping cart (add, remove, change quantity)
- **F-06** Order submission with form validation
- **F-07** Admin panel: add/edit/delete products
- **F-08** Admin panel: view orders and update status

Non-functional:

- **NF-01** Page load time < 2 seconds
- **NF-02** Support for 100 concurrent users
- **NF-03** Responsive UI for mobile and desktop
- **NF-04** Password hashing (bcrypt)
- **NF-05** Persian (Farsi) language support with RTL layout

5.2 Out of Scope

Item	Reason
Real payment gateway	Requires license and infrastructure — simulation only
Mobile application	Web-only focus
Shipping and logistics	Beyond one semester
Real warranty and after-sales	Legal complexity
Online chat support	Low priority
Multilingual (Persian/English)	Persian-only focus

5.3 Constraints

- **Time:** 14 weeks, 3 Sprints
- **Team:** 3–4 members
- **Technical:** No dedicated server; deploy on a free cloud service
- **Budget:** Zero (free tools only)

6 Success Metrics

6.1 User Metrics

Metric	Target	Measurement
Order submission time	< 3 min	Usability test
Admin product-add time	< 2 min	Usability test
User satisfaction	> 80%	Simple survey

6.2 Technical Metrics

Metric	Target
Code Coverage	> 70%
Critical bugs per release	Zero
CI build time	< 5 min
Deployment success	100%

6.3 Process Metrics

- On-time Sprint delivery
- Compliance with Definition of Done per Story
- Documentation kept up to date at the end of each Sprint

7 High-Level Risks

Risk	Probability	Impact	Mitigation
Requirement changes mid-project	High	Medium	Short Sprints, flexible Backlog
Time shortage	Medium	High	Small MVP, MoSCoW prioritization
Team skill gaps	Medium	Medium	Instructor mentoring, task splitting
Data loss	Low	High	Automated backup, Git
Scope Creep	High	High	Strict MVP boundaries, instructor approval

8 Approach and Methodology

8.1 Methodology

- **Lightweight Scrum:** 3 Sprints of 2–3 weeks
- **Management tool:** GitHub Projects
- **Ceremonies:** Sprint Planning, short Daily (online), Review, Retrospective

8.2 Proposed Technology

Layer	Technology
Backend	Node.js + Express
Frontend	React
Database	PostgreSQL
Version Control	Git + GitHub
CI/CD	GitHub Actions
Documentation	Markdown in GitHub

8.3 Definition of Done

A Story is “Done” when:

1. The code is written and merged.
2. Unit tests are written.
3. Code review is completed.
4. Related documentation is updated.
5. It works in the demo environment.

9 Roadmap

Sprint	Weeks	Focus	Output
Sprint 1	1–5	Catalog and discovery	Product list, search, filter, cart
Sprint 2	6–11	Transaction and management	Order submission, comparison, admin panel
Sprint 3	12–14	Quality and release	Full testing, CI/CD, documentation, Demo Day

10 Approval

Role	Name	Date	Signature
Product Owner	[Instructor Name]	September 27, 2026	
Simulated Customer	Mrs. Rezaei	September 27, 2026	
Team Representative	[Name]	September 27, 2026	

A Change History

Version	Date	Changes	Author
